

BREATH TESTING FOR THE THREE PRIMARY FERMENTED GASES

trio-smart is a **mail-in breath test** that measures the levels of **hydrogen, methane,** and **hydrogen sulfide** in a patient's breath after lactulose or glucose consumption. Measuring the three primary fermented gases can offer you clearer insight leading to a personalized treatment plan more quickly.

trio-smart is a validated Laboratory Developed Test (**LDT**) and is conducted in a **CLIA-certified** laboratory.

The **American College of Gastroenterology Clinical Guideline for Small Intestinal Bacterial Overgrowth** provides authoritative validation of the value of breath testing technology like trio-smart and supports mail-in kits with testing in CLIA-certified labs.

The **North American Consensus on Hydrogen and Methane-Based Breath Testing** in Gastrointestinal Disorders establishes common standards utilized by trio-smart.

INDICATIONS & CORRELATIONS

HYDROGEN
Indicative of: SIBO
Small Intestinal Bacterial Overgrowth

Predicts:
Bloating and Diarrhea

METHANE
Indicative of: IMO
Intestinal Methanogenic Overgrowth

Predicts:
Constipation

HYDROGEN SULFIDE
Indicative of: **Excess Hydrogen Sulfide**
Predicts: **More Severe Diarrhea**

INTERPLAY OF THESE FERMENTED GASES

Hydrogen is produced by fermenting bacteria, but is also consumed by other organisms, resulting in the production of other gases, including **methane** and **hydrogen sulfide**.

These findings are important, because they suggest that **providers cannot rely solely on hydrogen** measurements, as they are directly affected by methane and hydrogen sulfide.
